

GAS RANGES WITH CORDLESS IGNITION

Ranges with standing pilots can no longer be manufactured

WNM110-P

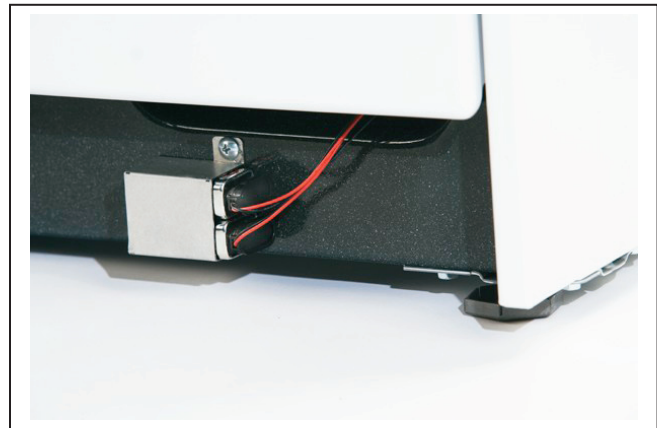

The Department of Energy has prohibited the manufacture of standing pilot gas ignition ranges in the United States, effective April, 2012.

To answer the demand for cordless gas cooking appliances, Brown Stove Works has designed a brand new Cordless Ignition System, available now.

How Cordless Ignition Works

This design utilizes efficient battery power for the pilot light, eliminating the need for a power outlet.

The power source is located behind the kickplate for easy access. Uses two (2) standard 9-volt batteries.

This feature is designated by a "-P" in the suffix of the model number. For example:

WNM110-7: Electronic Ignition

WNM110-P: Cordless Ignition

To order call 800-251-7485

In Tennessee call 800-277-2490 or 423-476-6544
